No problem. We are trying to figure out how to present private home well data for the public.

Judith is not planning to do anything. Please disregard my initial email to you today. A internet calculator was used to convert ng/l data to ppt data. Unfortunately, the calculator was wrong and resulted in some initial misinterpretation. If you'd like to discuss, feel free to call me. Thanks.

May I ask what Judith is planning to do with this information. If I understand you correctly, some of the data she received is from private residences.

Hi Nathan, I'm sorry to bother you on this snowy Saturday afternoon. The Village of Hoosick Falls shared the latest DOH sampling results with us which were reported in ng/L. Judith asked that I try to get in touch with you asap about this. If the results are correctly being reported in ng/L this would mean we now have results significantly

elevated above EPA's provisional health advisory (400ppt). I can be  
reached anytime at [REDACTED] Thank you.
